3.0" LED EXTENDED ARROW

MICRO COMM

3.0" LED EXTENDED ARROW

Long life, solid state bi-color, white or blue arrow for lanterns. Accepts Micro Comm 3 wire. The bi-color arrow is green for up and red for down or blue up and down or white up and down.

TYPICAL APPLICATIONS:

- > Hall and car lanterns
- > Pl. combo w/ 180° viewing angle

FEATURES:

- > Ultra-thin packaging
- > Red down / green up solid blue or solid white
- > Fast Micro Comm 3-wire hookup
- > Conforms to ADAAG 4.10.4
- > Jamb mountable (Vertical style only)

METAL:

- > 70100039 (Vertical & Horizontal)

3.0 INCH LED EXTENDED ARROW

Long life, solid state bi-color, blue or white arrow for lanterns. Accepts MicroComm 3 wire. The bi-color arrow is green for up and red for down or solid blue or solid white.

Typical applications:

- Hall or car lanterns.

Features:

- Ultra-thin packaging
- Red down/green up or solid blue, or solid white
- Fast MicroComm 3-wire hookup
- Conforms to ADAAG 4.10.4

DEFAULT SETTINGS

CHART TO SELECT FLOOR POSITION WITH DIP SWITCH

The Micro Comm driver must be programmed to send messages with the level required to activate the features listed below.

DIP switch 1 has no function on this unit.

To blank the lantern during a fire main (level three) message, turn on DIP switch 2 (FM).

To blank the lantern during a fire alternate (level two) message, remove resistor R8 (FA) from the board.

To use the unit as an in-car lantern using travel signals, turn off DIP switches 3-8 and verify resistor R9 (64) is installed.

To use the unit as an in-car lantern using arrival signals, turn on DIP switches 3-8 and remove resistor R9 (64) from the board.

This lantern can operate in hall mode. Use the chart above to set the DIP switch to the desired floor. The Micro Comm driver must be set up properly to send arrival information.

To use the unit as an arrival lantern above floor 63, remove resistor R9 (64) from the board and set the DIP switches as shown on the chart, adding 64 to the floor number shown. For example, to set the lantern for floor 75, remove resistor R9 and set the DIP switches for floor 11 (64+11=75).

To operate the lantern as a rear unit remove resistor R10 (R) from the board. NOTE: The Micro Comm driver must send the MC2000 data stream to use this feature. Call Tech Support at 419-636-6705 for information.

AVAILABLE FUNCTIONS FOR MICRO COMM 2000 DISPLAYS

The Micro Comm driver must be programmed to send messages with the level required to activate the features listed below. Level 0 messages will always be displayed, regardless of DIP switch or resistor settings.

For message blocking, turn on DIP switch 1 (MB). Level 1 messages will not display.

To blank the display during a fire main (level three) message, turn on DIP switch 2 (FM).

To blank the display during a fire alternate (level two) message, remove the **FA** resistor from the board.

To operate the display using travel signals, the **64** resistor must be installed and DIP switches 3-8 must be set to OFF.

To operate the display as a riding lantern using in-car arrival signals, remove the **64** resistor and set DIP switches 3-8 to ON.

Most Micro Comm 2000 displays can operate as hall (arrival) lanterns. Use the chart at right to set the DIP switches to the desired floor. For floors above floor 63, remove the **64** resistor from the board, subtract 64 from the desired floor number, and use the chart to set the DIP switches for the resulting floor number. For example, to set the display for floor 75, remove the **64** resistor and set the DIP switches for floor 11 (75-64=11). The Micro Comm driver must be configured to send arrival information.

To operate the display as a rear unit remove the **R** or **REAR** resistor from the board. NOTE: The Micro Comm driver must be sending the MC2000 data stream to use this feature. Call Tech Support at 419-636-6705 for more information.

NOTE: MUST BE USED WITH A CLASS 2 POWER SUPPLY
