## AVAILABLE FUNCTIONS FOR MICRO COMM 2000 DISPLAYS

The Micro Comm driver must be programmed to send messages with the level required to activate the features listed below. Level 0 messages will always be displayed, regardless of DIP switch or resistor settings.

For message blocking, turn on DIP switch 1 (MB). Level 1 messages will not display.

To blank the display during a fire main (level three) message, turn on DIP switch 2 (FM).

To blank the display during a fire alternate (level two) message, remove the **FA** resistor from the board.

To operate the display using travel signals, the **64** resistor must be installed and DIP switches 3-8 must be set to OFF.

To operate the display as a riding lantern using in-car arrival signals, remove the **64** resistor and set DIP switches 3-8 to ON.

Most Micro Comm 2000 displays can operate as hall (arrival) lanterns. Use the chart at right to set the DIP switches to the desired floor. For floors above floor 63, remove the **64** resistor from the board, subtract 64 from the desired floor number, and use the chart to set the DIP switches for the resulting floor number. For example, to set the display for floor 75, remove the **64** resistor and set the DIP switches for floor 11 (75-64=11). The Micro Comm driver must be configured to send arrival information.

To operate the display as a rear unit remove the **R** or **REAR** resistor from the board. NOTE: The Micro Comm driver must be sending the MC2000 data stream to use this feature. Call Tech Support at 419-636-6705 for more information.

NOTE: MUST BE USED WITH A CLASS 2 POWER SUPPLY

### DIP SWITCH SETTINGS FOR FLOOR POSITION

| FLOOR      | SWITCH VALUE |     |     |     |     |     | FLOOR    | SWITCH VALUE |     |     |     |     |     |
