STEPS TO TEST LINK FROM ELBNK TO ELITE PI

NOTE: Test assumes the ELBNK to ELITE PI connections are complete.

1. To test the output channel links, set S1, DIP switch 1 to *ON*.
2. Use the table below to set the S5 DIP switches for the channel to test.
   a. If the two-digit display shows Cn and then flashes between D1 and OK, go to Step 4.
   b. If the two-digit display shows Cn and then flashes between D1 and --, go to Step 3.
3. Unplug the connector from the output channel jack (JPn) and swap RX+ with TX+, swap RX- with TX-, and then plug the connector back into JPn.
   a. If the two-digit display shows Cn and then flashes between D1 and OK, go to Step 4.
   b. If the two-digit display still shows Cn and then flashes between D1 and --, contact C.E. Electronics Tech Support department at 419-636-6705, extn. 730. Ⓐ
4. Return to Step 2 for any remaining outputs in use.
5. After testing all of the outputs in use, set S1, DIP switch 1 to *OFF*.

The ELBNK-BX can support up to 8 cars and one hall link.

NOTE:

1. BASEBAND VIDEO AND LINE LEVEL AUDIO
2. EQUIPMENT NOT SUPPLIED BY C.E.

Use the Host Computer to create new layouts and to transfer them to the Elite PI displays. Otherwise, the Host Computer isn't used.

FEATURE	WIRING	DESCRIPTION
Graphics Update	Two twisted, shielded pairs and a common wire (24 AWG or larger)	Allows customer to make changes to the screen content using a host computer. While transferring changes, normal display operation will continue.
MICRO COMM	Three 18 AWG Wires	Allows the display to know position, direction, door strobe, priority messages, etc.
Live Video - Coax	One Coax Cable (RG6 Recommended)	Allows the Elite PI to display a real-time composite video image (i.e. CCTV, Security Desk, News Network, etc.)
Live Video - Twisted Pair	One twisted, shielded pair (24 AWG or larger)	Allows the Elite PI to display a real-time composite video image. This option requires more hardware than live video over coax and video quality is harder to control.
Audio	One twisted, shielded pair (24 AWG or larger)	Allows audio to be used in conjunction with the Live Video. The speaker is supplied by the customer.

4) BNC composite video cable - 75-ohm RG6 recommended.
5) Twisted pair video cable - Unshielded twisted-pair wire recommended.

VIDEO TEST MODE

Video test mode uses a combination of DIP switch and rotary switch settings. Please write down the initial setting of the S3 and S4 rotary switches before starting this process.

Entering Video Test Mode

Set DIP switch 1 to OFF, then set S3 and S4 to position F. Next, set DIP switch 1 to ON. The Live Video Adjustment menu will appear on the screen with Brightness highlighted.

Choosing Item to Adjust

The highlighted item is the current selection. To choose a different item to adjust, set S3 as shown below:

S3	Adjustment	S3	Adjustment
F	Brightness	B	Video Standard
E	Contrast	A	Vertical Stretch
D	Color	9	Default
C	Tint	8	Original

Making Adjustments

Highlight the item to change and turn S4 for the best display quality.

Default and Original Settings

Default will reset the display to the factory default settings, and Original will cancel any changes made and restore the values stored before entering Video Test mode. Highlight the item to use, turn S4 in eithe direction, and wait five seconds. The display will reset to the default or previous settings.

Exiting Video Test Mode

To save the new video settings and exit Video Test, set DIP switch 1 to OFF. Reset S3 and S4 to the values recorded before starting the process.

Video Gain

JP7 and JP6 control the video gain. Use a shunt to short the pins of the switches as shown in the table below (OFF = No Shunt, ON = Shunt):

JP7	JP6	VIDEO GAIN
OFF	OFF	No Gain (Default)
OFF	ON	Lowest Gain
ON	OFF	| | |
ON	ON	Highest Gain

Adjusting Audio Volume

If audio is needed, connect an 8-ohm speaker to J1 on the converter board. Set the volume by adjusting Volume pot R2 (3/4-turn pot). Adjust the pot clockwise to increase the volume.
